### Disclaimer

If you buy or use this publication you should understand clearly that it has been produced solely for learning purposes. While the author and Western Sydney University Enterprises Pty Limited have made every effort to ensure that the material in this publication is accurate and of high quality, you are expressly advised that you should not rely on the contents of this publication in order to make decisions having legal, accounting, property, financial, investment or similar consequences or for any purpose other than learning. For any purposes other than learning you should first obtain the advice of an appropriately qualified professional. The author and Western Sydney University Enterprises Pty Limited disclaim any liability to any person, whether a student or otherwise, in respect of anything, and the consequences of anything, done or omitted to be done by any such person in reliance, whether wholly or partially, on the whole, or any part of, or omission from, the contents of this publication.

Western Sydney University ABN 53 014 069 881 is a registered provider under the Commonwealth Register of Institutions and Courses for Overseas Students (CRICOS). Provider Number 00917K.

Western Sydney University Enterprises Pty Limited ABN 44 003 474 468 trading as Western Sydney University The College (CRICOS Provider Number 02851G | RTO Provider Number 90319) is a wholly owned entity of Western Sydney University. Academic Pathway Programs are delivered by Western Sydney University The College under arrangement with Western Sydney University.

<b>Subject name</b>	Introductory Programming
<b>Subject number</b>	COMP0002
<b>Coordinator</b>	Zdenka Misanovic
<b>Session</b>	2021.3
<b>Handbook summary</b>	This subject introduces students to the principles required for the effective design and development of computer programs. This subject has been developed to help students acquire an understanding of essentials in designing programs theoretically and implementing them practically, using an integrated development environment (IDE).
<b>Credit point value</b>	10
<b>Prerequisite/s</b>	N/A
<b>Corequisite/s</b>	N/A
<b>Subject incompatible with and not to be counted for credit with</b>	N/A
<b>Assumed knowledge</b>	The ability to create a mathematical expression for a given problem scenario. This would require knowledge of basic arithmetic, percentages and simple statistical measures.
<b>Subject level</b>	Level Z — Non-award subject
<b>Attendance requirements</b>	Students are expected to attend at least 80% of classes. Educational research consistently demonstrates that this attendance level is associated with a high likelihood of achieving a passing grade.
<b>Enrolment restrictions</b>	Students must be enrolled at The College.
<b>Learning outcomes</b>	<p>On successful completion of this subject, students should be able to:</p> <ol style="list-style-type: none"><li>1. define terms such as structured programming, variables, constants, control structures, modularisation, cohesion, coupling, function, procedures, parameters and arguments</li><li>2. illustrate the steps involved in program development</li><li>3. solve problems and illustrate solutions using sequence control structure with flowcharts and/or pseudocode, which are then coded in a 3GL language such as C++</li><li>4. solve problems and illustrate solutions using selection control structure flowcharts, pseudocode and translate to C++</li><li>5. solve problems and illustrate solutions using iteration control structure flowcharts, pseudocode and translate to C++</li><li>6. solve problems using modularisation with parameter passing</li><li>7. code, debug and test programs in C++ using an Integrated Development Environment (IDE), and</li><li>8. develop a set of input test data and desk check pseudocode.</li></ol>

<b>Subject content</b>	<p>In this subject, students will learn about:</p> <ul style="list-style-type: none"><li>• introduction to steps in program design and development</li><li>• problem solving and developing algorithms using IPO charts, flow charts and pseudocode</li><li>• sequence control structure</li><li>• selection control structures using IF and CASE statements</li><li>• repetition control structures using REPEAT, WHILE and FOR loops</li><li>• modularisation, procedures/void functions, functions and parameter passing</li><li>• input output data tables and desk check tables</li><li>• use of an Integrated Development Environment (IDE), and</li><li>• translating pseudocode into C++ using correct syntax.</li></ul>
<b>Mode of delivery</b>	<p>This subject consists of six hours of supervised computer laboratory sessions. In addition, students will be required to access vUWS regularly, in order to download additional learning material, and to check for any announcements about the subject that may be posted there.</p>
<b>Online learning requirements</b>	
<b>Essential requirements</b>	<p><b>Recommended texts</b></p> <p>Allain, A 2012, <i>Jumping into C++</i>, CProgramming.com, San Francisco, CA.</p> <p>The College, <i>Introductory programming workbook</i>, Western Sydney University The College, Sydney.</p> <p><b>Additional readings</b></p> <p>Farrell, J 2013, <i>Programming logic and design: comprehensive version</i>, 7th edn, Course Technology, Boston, Mass.</p> <p>Robertson, LA 2006, <i>Simple program design: a step-by-step approach</i>, 5th edn, Cengage Learning, Australia, South Melbourne, Vic.</p> <p><b>Essential equipment</b></p> <p>A USB flash memory drive is strongly recommended for transporting files between home and The College.</p>

---

## ASSESSMENT ITEMS AND WEIGHTING

Assessment for this subject will be based on the following components:

Task	Weighting	Learning outcomes assessed	Mandatory task
1. Class work	20%	3-8	Yes
2. Class test (1.5 hours)	20%	3-5	Yes
3. Project	20%	3-8	Yes
4. End of Session exam (2 hours)	40%	1-8	Yes
TOTAL	100%		

For details of assessment due dates, please refer to the learning guide for this subject.

All marks will be determined in accordance with The College [Assessment Policy](#).

All assessment tasks are mandatory unless otherwise specified. Should a student fail to attempt/submit the first formal assessment task in a subject, they will be deemed to be at risk and will need to follow an intervention plan in order not to receive a Fail Non-Submission (FNS) grade. However, failure to attempt/submit all other mandatory assessment tasks will result in an immediate FNS grade for the subject.

To pass this subject, students must:

- attempt/submit all mandatory assessment tasks, including the End of Session exam, and
- achieve a minimum overall mark of 50%.
